Summary

Experienced Network Engineer and IT Cybersecurity graduate student at Arizona State University. Proven track record in enterprise network infrastructure, cloud security, and automation. Seeking full-time opportunities starting May 2027.

Education

M.S. Information Technology, Cyber Security	Graduating May 2027
Arizona State University, Tempe, AZ	4.00 GPA
Relevant Coursework: Network Forensics, IT Cloud Infrastructure, Cloud Operations and Security (AWS), IT Security Compliance	
MTech in Software Engineering (4+1)	Aug 2022
Vellore Institute of Technology, Chennai, India	8.38 GPA

Technical Skills and Certifications

Programming Languages: Python, Java, HTML, SQL

Networking: Routing, Switching, Firewalls (Cisco, Palo Alto), VPNs, ACLs, DNS, DHCP, F5 Big IP, Load balancing, TCP/IP, OSI

Security: IAM, Incident Response, Wireshark, Packet Tracer, SIEM, Nmap, Network Protocols, Social Engineering, HIPAA, GDPR

Tools and OS: xMatters (On-call), REMEDY, JIRA, Power BI, Secure CRT, NAT Automation, CSM, Ubuntu, Linux, MacOS

Cloud technologies and Certifications: AWS – (IAM, EC2, S3, Lambda, RDS), OCI foundations, CCNA, Google Cybersecurity

Professional Experience

Network Engineer: Oracle, Bengaluru, India. Aug 2022 – Dec 2024

Responsible for Network Infrastructure across LAN domains and enhanced network security for 2500+ hospitals, ensuring CIA, HIPAA compliance and uninterrupted data flow. Provided Customer Service, Incident and escalations support, and 24/7 On-call support.

- Provisioned, configured, and maintained **500+** IPsec site-to-site VPN tunnels between enterprise environments, resolving connectivity issues and optimizing network performance, ensuring secure connectivity through encryption and key rotation.
- Created and enforced security policies on Palo Alto firewalls by creating and configuring object groups, granular access control rules, and application-aware filtering to restrict unauthorized traffic, reduce false positives and enhance overall security posture.
- Designed and deployed NAT and ACL configurations across the enterprise infrastructure, leveraging Cisco CSM tool for controlled deployment and configuration by eliminating 50% manual changes. Documented all changes in JIRA and Remedy for visibility.
- Tested and Validated a Python-based automation workflow for NAT updates, reducing configuration time by 99.9%, which improved the usability of the NAT creation, modification and deletion user interfaces for clients.
- Managed **5000+** network devices while configuring and maintaining Virtual IPs on F5 Big IP, ensuring efficient load balancing, minimal downtime, optimized traffic distribution and reliable application delivery for clients.
- Spearheaded incident resolution and 24/7 On-call rotations, earning formal recognition from Oracle client tech leaders and senior directors for expertly diagnosing and resolving complex VPN issues.

System Intern: Oracle Cerner, Bengaluru, India. Aug 2021 – Aug 2022

- Assisted in designing and testing the WAN environments, and network systems while documenting troubleshooting procedures.
- Developed hands-on skills in virtualization environments including Windows Server 2016 and Kali Linux and utilizing SecureCRT and SSH-based frameworks for RDP. Facilitated team scrum meetings and served as scribe to accurately document MOM updates.
- Utilized JIRA and Remedy to track daily agile tasks, manage sprint workflows and monitor system performance for 10000+ devices.

Academic Projects and Papers

Cyber Security Incident Tracking Database: Fall 2025

- Designed and implemented a structured incident management system to track cybersecurity incidents and vulnerabilities.
- Built utilizing a normalized relational database to capture and link response actions, systems, analysts, security levels and SLAs.
- Enabled centralized incident monitoring, SLA-based response tracking, root cause analysis and structured security reporting ultimately improving operational visibility.

Privacy in Healthcare: Balancing Research and Patient Rights: Spring 2025

- Highlighted the challenge of safety in sharing the healthcare data for medical research without risking patient privacy.
- Explored how modern tools like blockchain and biometrics can secure patient data while following HIPAA and GDPR laws.
- Proved combining strict regulations with advanced technology protects patients while supporting lifesaving medical research.

Other Work Experience

Technology Consultant: Arizona State University, Tempe, AZ: (20-hr) Apr 2025 – Mar 2026

- Assisted faculty during live classes by troubleshooting AV and Network connectivity issues, ensuring system security.
- Maintained classrooms and labs by imaging devices, performing software updates/reboots, and conducting routine checks.

IT Support Analyst : Scottsdale Arabian Horse Show - (Volunteer) Feb 2026

- Provided reliable internet connectivity by fabricating ethernet cabling for event vendors and 8+ Horse show arenas.
- Configured and deployed computer workstations, printers and monitors for all customers, actively troubleshooting technical and Wi-Fi issues to ensure systems were fully operational and ready to use.
